

A new era begins. Become its pioneer.

ZEISS VISUFIT 1000

NEW

The digital age will redefine optometry practice. Patients today are more demanding than ever. Customization and convenience will become key elements of differentiation for your practice. ZEISS VISUFIT 1000 solves all these issues and more.

The digital platform for your business success.

ACCURACY

3D centration using mutually calibrated cameras gives you a complete 180° view with just one shot. That also means there is no need for a frame-clip that modifies the patient's natural posture.

Convergence Control by a laser speckle for a reliable determination of centration parameters as a projection to infinity which avoids convergences, even at short distance.

Right and left vertex distance determination provides an unprecedented level of accuracy in the calculation of the lens design, taking into account individual wear parameters.

EASE-OF-USE

Whether you use a computer or an iPad, the device management is easy and fast, regardless of your level of experience or optical training.

The body posture correction assistant grants your patient's natural position.

FRAME COMPARISON AND LENS SIMULATION

With ZEISS VISUFIT 1000 your patient can compare an unlimited number of frames and lenses directly in a 180° view.

Future features like frame customization and virtual try-on will further customise the whole experience by the use of the ZEISS Avatar.

A new era begins. Become its pioneer.
